

AI as an inflection point driving Construction Productivity

Geoff Roberts

Industry Director
Oracle

ORACLE

ORACLE

Construction and
Engineering

“Deliver on the promise of AI to transform how we design, build and operate critical assets, while managing exposure to risk for our customers.”

Why Oracle?

ORACLE

“Oracle is well on its way to being not only the world's largest cloud application company but also one of the world's largest cloud infrastructure companies.”

SAFRA CATZ
CEO, Oracle

MARCH 18, 2025

Oracle Invests \$5 Billion to Fuel UK's AI-Driven Future

Oracle announces US\$ 14 billion investment into AI and Cloud in Saudi Arabia

Oracle to invest \$6.5bn in AI and cloud computing in Malaysia

The tech giant plans to open a cloud region to help boost the country's digital economy, where the government wants to enhance its AI capabilities and to create 3,000 smart factories by 2030.

UK Construction Spend - £200Bn/annum

Public & Private combined

UK Gov – Major Projects Portfolio

GMPP summary for projects reporting monetised benefits

	Government Major Project Portfolio	213 projects	£996 (bn) whole life cost	£742 (bn) whole life benefits
	Infrastructure and Construction	68 projects	£433 (bn) whole life cost	£384 (bn) whole life benefits
	Military Capability	45 projects	£327 (bn) whole life cost	£22 (bn) whole life benefits
	Government Transformation and Service Delivery	76 projects	£200 (bn) whole life cost	£294 (bn) whole life benefits
	ICT	24 projects	£36 (bn) whole life cost	£42 (bn) whole life benefits

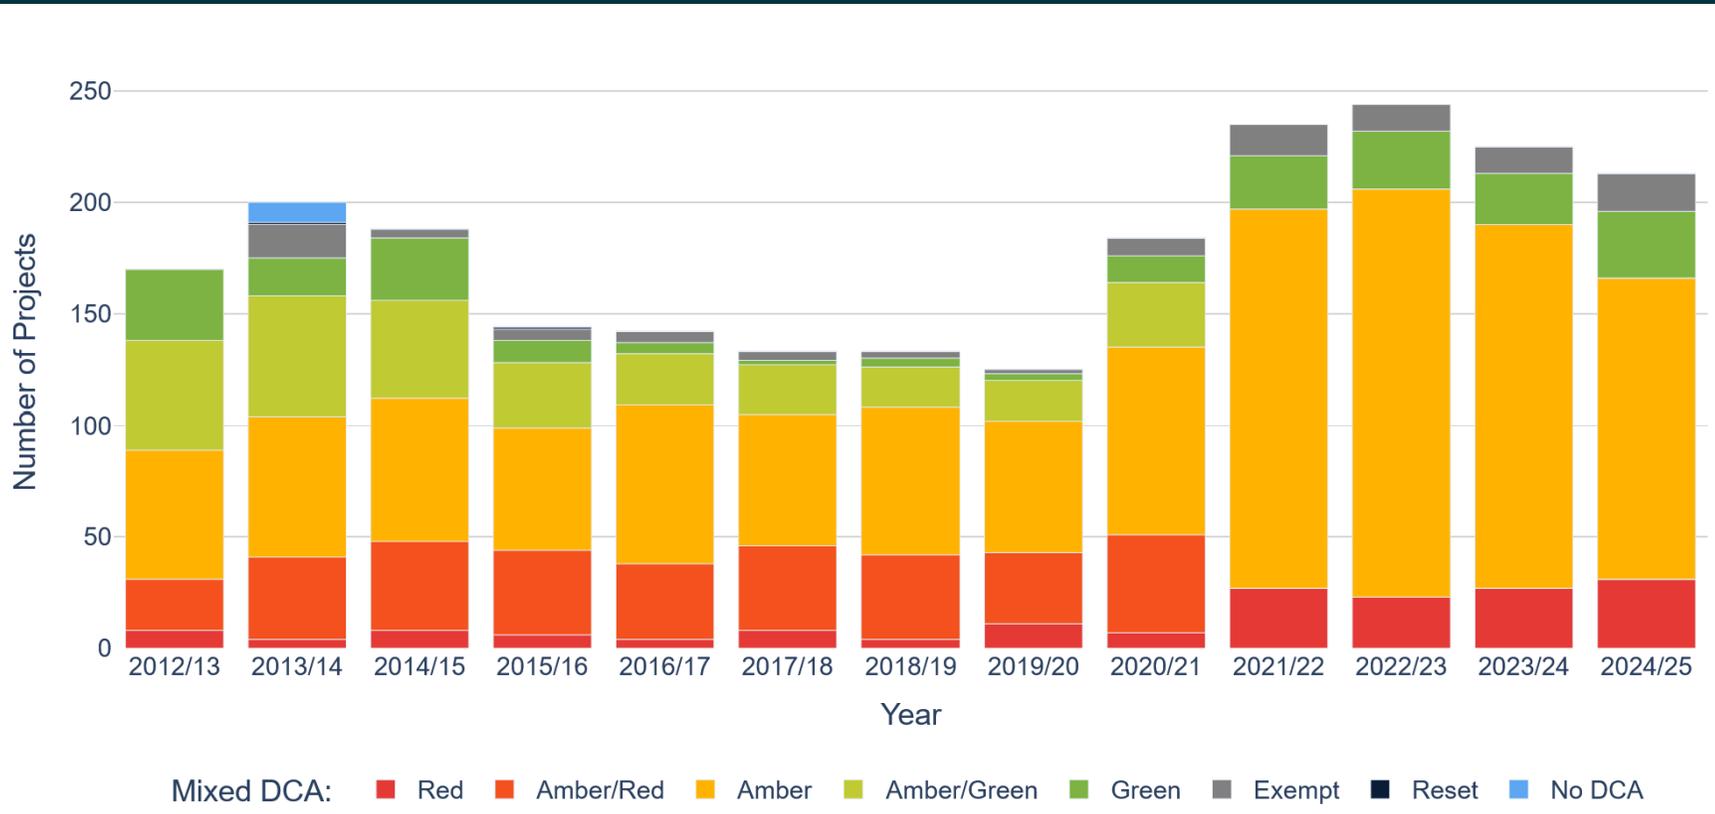

NISTA annual report 2024-2025

National Infrastructure and Service Transformation Authority (NISTA)

Delivery Confidence

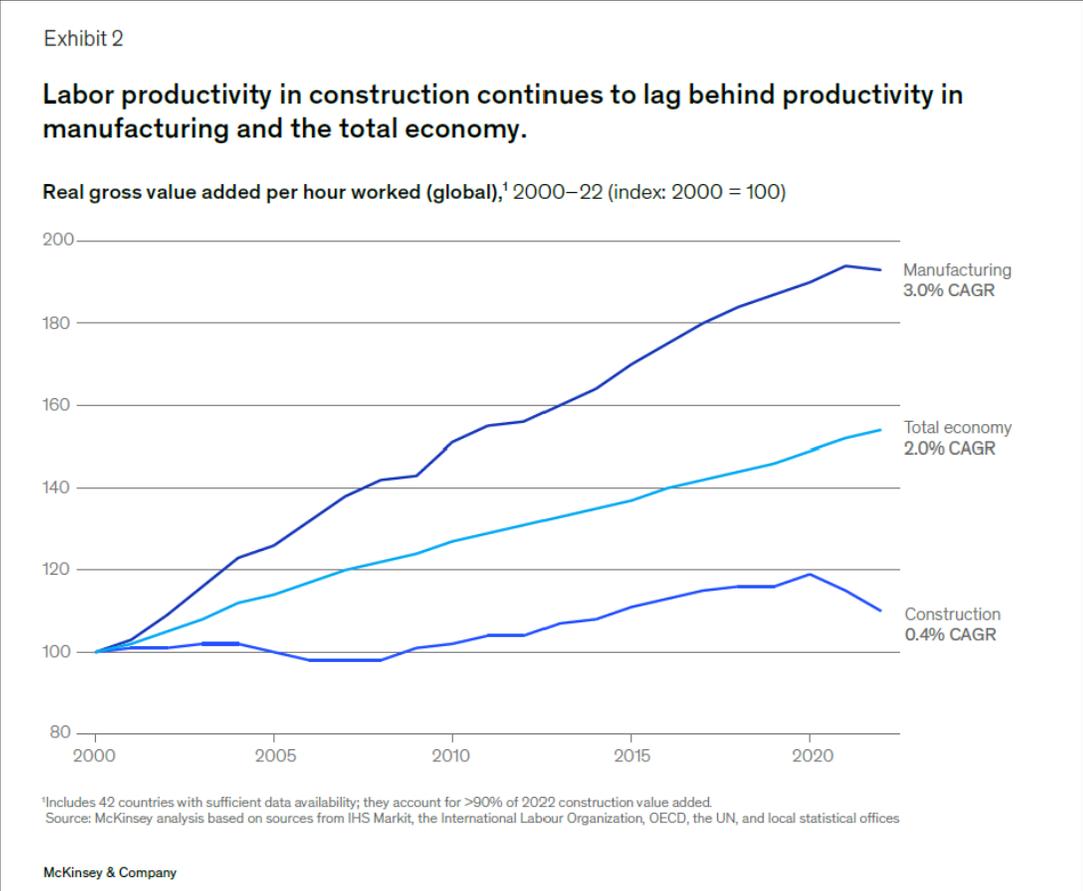

GMPP delivery confidence over time
DCA analysis 2013 - 2025

Productivity is a significant factor

NISTA annual report 2024-2025
Delivery Confidence Assessment (DCA)

Productivity

UK construction productivity grows at the annual rate of 0.3%

What is the promise of AI for Construction?

Profitability

- Resource and Waste optimization
- Contract comprehension and management
- Audit systems
- Predictive

Efficiency

- Scheduling Optimization
- Data summarization
- Knowledge transfer
- Less manual workload
- Upload checking document quality

Safety

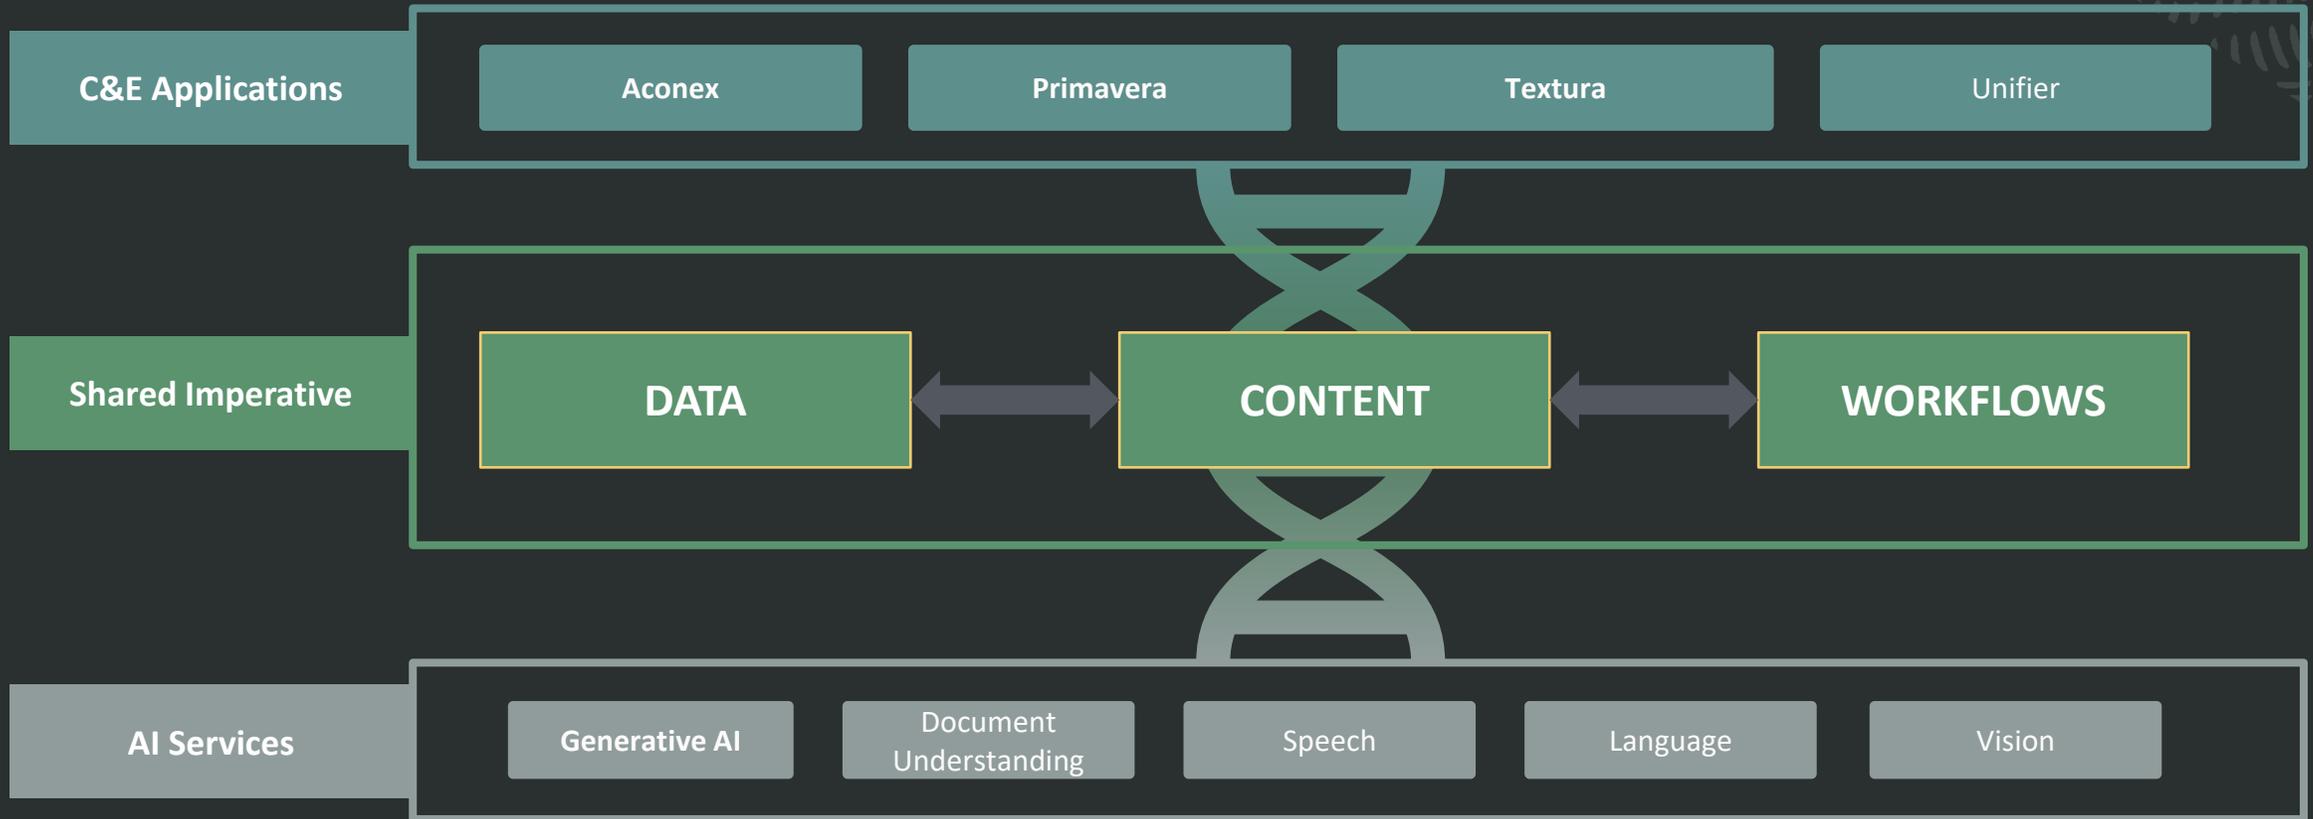

- Always-on Safety Monitoring
- Reduction in incidents

Security & Risk

- Connected but secure
- Authorized tools
- Robust recovery
- Threat mitigation

Where technology meets Industry expertise

Oracle 26AI Db released at AI world

Why Oracle

Best Technology

Oracle Cloud Infrastructure

- Highest performance
- Built-in security
- Lowest complexity
- Chosen by leading LLM providers

Enterprise Data

Unified Application Data

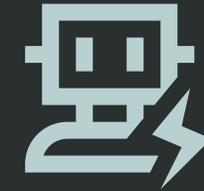

- Trusted systems of record
- Enriched with industry context
- Data security carries through AI
- Integrated application suite

Embedded AI

AI for Applications

- Fastest time to value
- Human in the loop
- Enterprise-grade guardrails

Extensible AI

Customization

- Extend Oracle foundation models
- Select a preferred LLM
- Build your on GenAI workflows

The Data Journey

Siloed Application Data

1. Descriptive

What is happening now?

E.g. Reports and dashboards

2. Reflective

What has typically happened in the past?

E.g. Baselines, benchmarks, lessons learnt

Integrated Data

3. Holistic

What are all the things that are happening now?

E.g. integrated insights across systems

4. Diagnostic

Why are they happening?

E.g. Root-cause analysis, What-ifs, exploratory analysis

Prescriptive Data

5. Predictive

What's likely to happen next?

E.g. Forecasting, simulations, Machine learning

6. Prescriptive

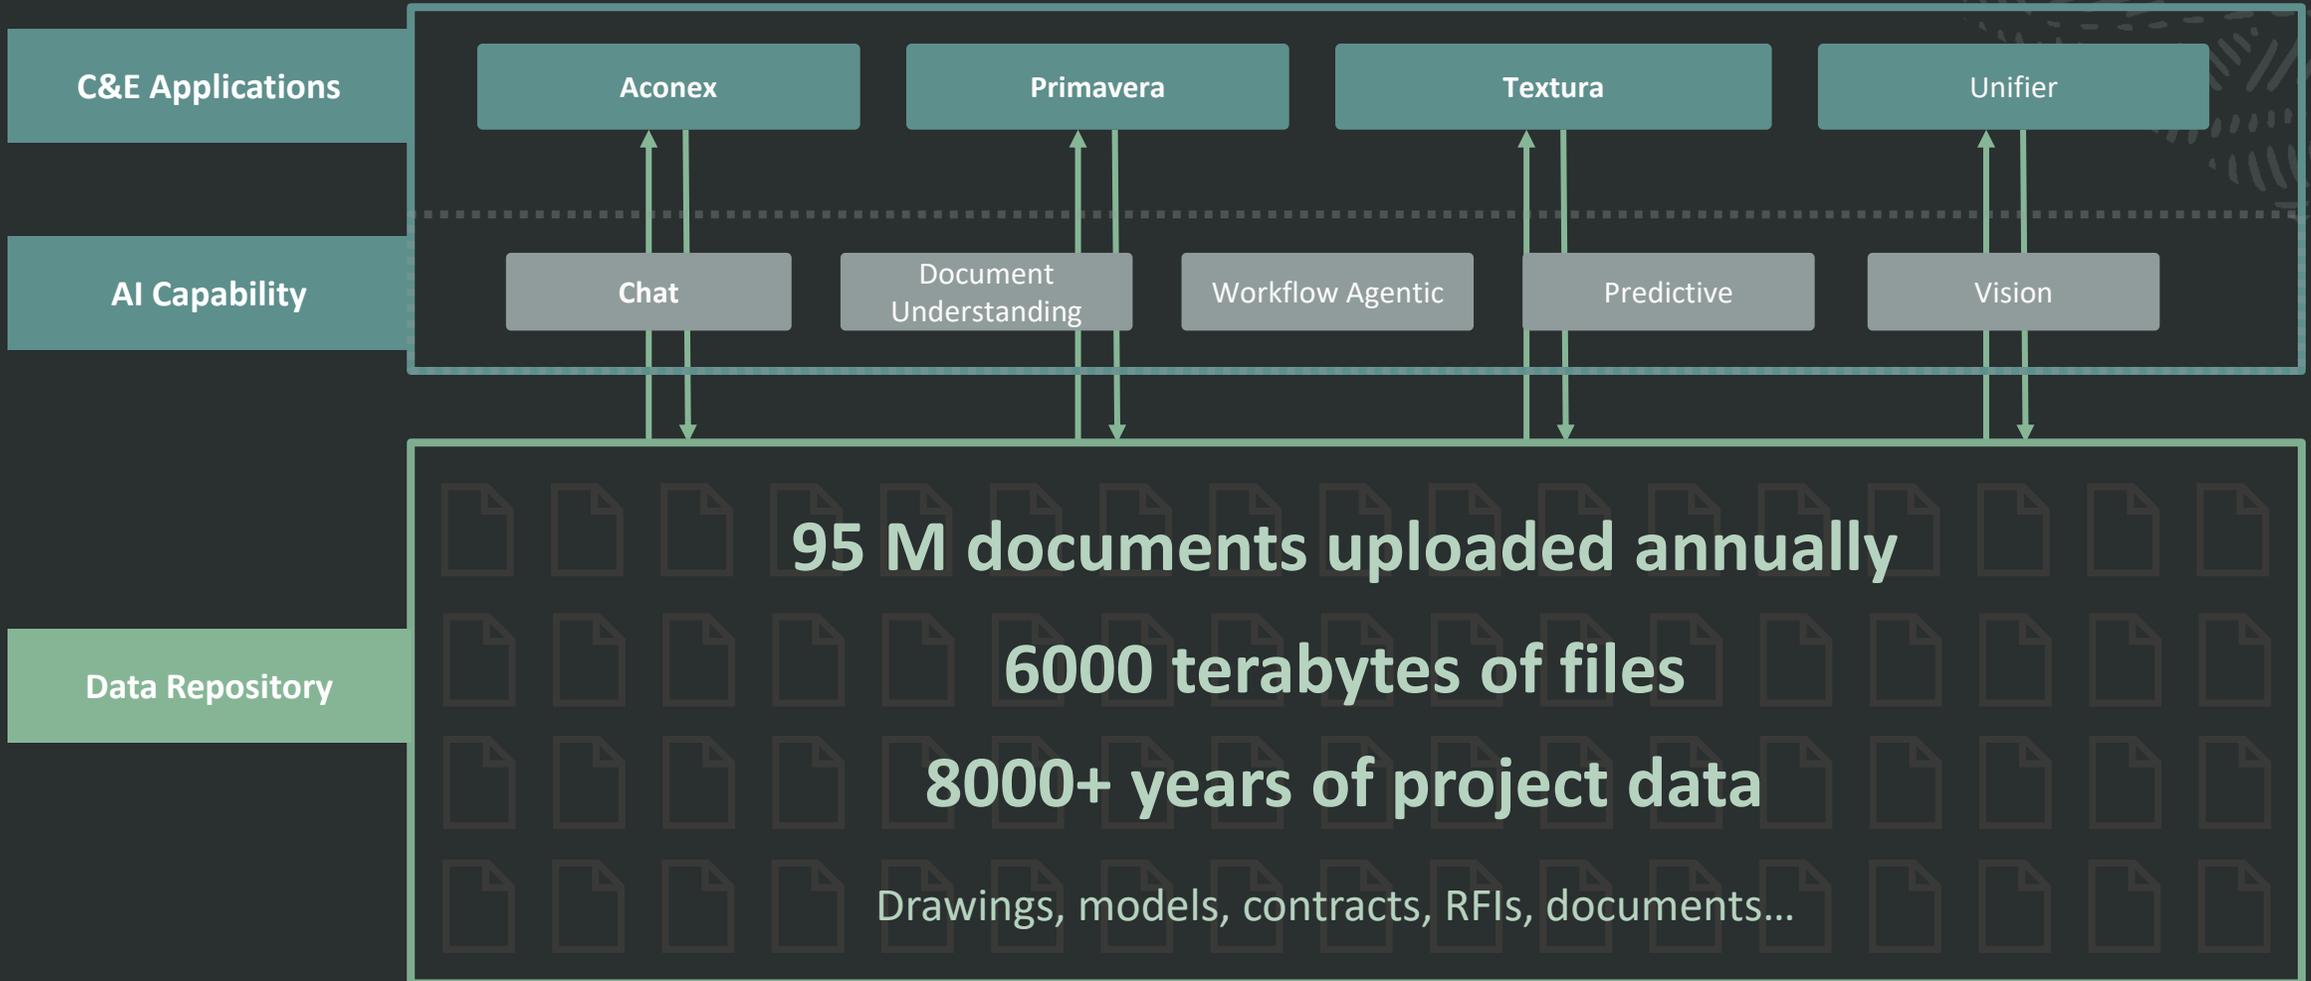

What should be done when it happens again?

E.g. Recommendations, optimizations

Extending the Executive: Construction and Engineering Intelligence

Construction and Engineering Intelligence:

Leveraging Oracle technologies for data aggregation, transformation, visualization, and predictive intelligence.

PREDICTIVE / PRESCRIPTIVE

Construction and Engineering Advisor:

AI powered predictive intelligence & recommendation models to proactively optimize the safety

DESCRIPTIVE

Construction and Engineering Analytics:

AI powered analytics dashboards to track KPIs, trends, identify outliers, providing insight across construction projects.

Leveraging The Oracle Stack For C&E Customers

OCI Native (OCI)

Autonomous Datawarehouse (ADW)

Oracle Analytics Cloud (OAC)

Managing AI Risk

Data Privacy and Sovereignty

- What data is being sent to third-party or external servers (e.g., cloud-based LLMs)?
- Where is the data stored and processed (e.g., geographic region, compliance with GDPR, HIPAA, etc.)?
- Can we ensure data never leaves our network or VPC?

Model Inputs and Data Leakage

- Is any sensitive or proprietary information used as input to AI models?
- Can we audit or redact the data before it is processed by the AI component?
- Are inputs to the model logged or retained by the vendor?

Model Outputs and Integrity

- How is the accuracy and reliability of the AI output validated?
- Could the AI generate harmful or incorrect outputs (e.g., hallucinations) that impact business decisions?
- What controls are in place to detect or prevent prompt injection or output manipulation?

Model Retraining and Feedback Loops

- Does the vendor use enterprise data to retrain or fine-tune their models?
- Is there any risk of our data leaking into the model corpus used across customers (data poisoning)?

Managing AI Risk

Compliance and Auditability

- Can all AI-related actions and outputs be logged and audited?
- Is the AI component compliant with relevant regulations (e.g., SOX, FedRAMP, ISO 27001)?
- Are third-party sub-processors or model providers disclosed and compliant?

Isolation and Control

- Can the AI functionality be sandboxed or isolated from core systems/data?
- Can we toggle AI capabilities on or off at the feature or user level?
- Can we use our own AI model or endpoint instead of the vendor's default model (BYOM – Bring Your Own Model)?

Trust and Explainability

- Can the AI's decision-making process be explained or justified?
- Does the vendor offer interpretability tools or model explainability APIs?
- Can humans override or verify critical decisions made by AI?

Ongoing Monitoring and Updates

- How often are models and dependencies updated?
- What visibility do we have into changes that may affect behavior or security posture?
- Are updates tested for regressions or new vulnerabilities?

Primavera Unifier with NEC4 Configuration

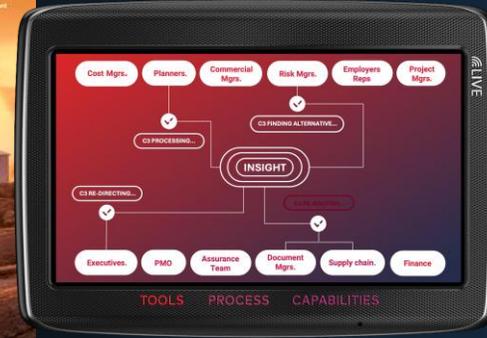

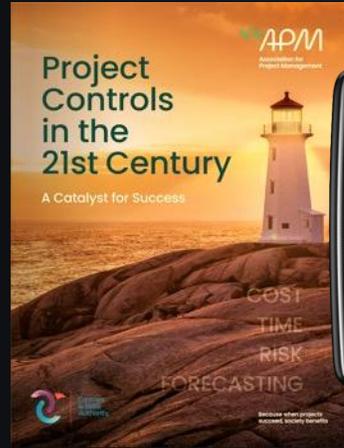

Compliance, co-operation, and control built on top of the Unifier Accelerator, the out-of-the-box solution is part of a complete and flexible project controls offering.

The C3 difference

Connected, Coherent, Controls

C3 is a pre-configured set of best-practice business processes and integrated data structures across P6, OPC, Unifier & CEI deployed for customers simultaneously via pre-integrated environments.

Sat-Nav for Projects – re-route easily when blocked

Fully Integrated Systems – no silos, seamless data flow

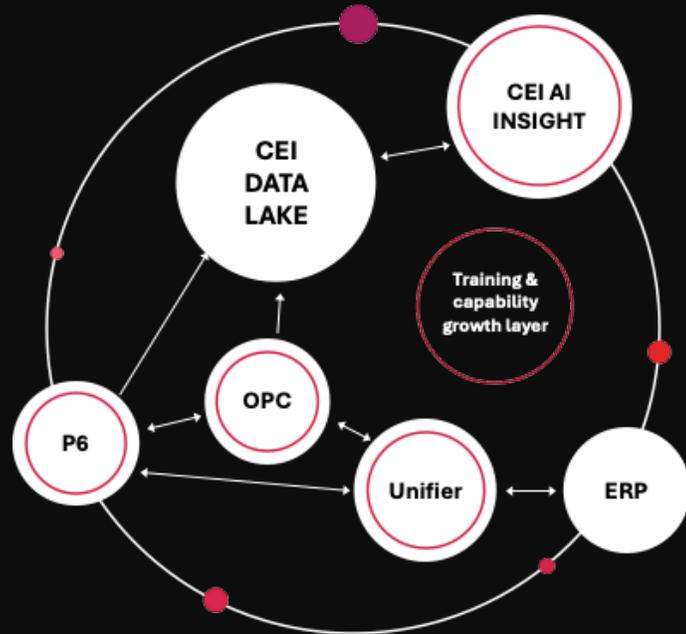

Next Gen Insights (CEI) – real-time answers on cost, risk, schedule

Better Estimates + Better Execution – tackles top 5 causes of failure

Rapid Deployment – from pilot to enterprise roll-out in 3–12 months

Scalable Impact – projects, portfolios and mega-programmes

People-First Adoption – adaptive training & role-based support

th3rcurve | ORACLE®

Breaking the cycle of project failure

Connected by design – best practice tools & process across your projects

Deployed rapidly, can be piloted on your projects within a matter of months

Generates precise data & insights – going beyond BI

Supports and trains your teams to be and feel better in their roles – Amplifying your teams' capabilities

UK Government & Defence Cloud (OC4)

- Two distinct, geographically separated regions make the UK Realm
- The two regions are interconnected via a highly resilient, private high-speed backbone.
- Dedicated to UK Government & Defence this Realm is accessible to Only UK Government and associated entities, as listed by Crown Commercial Services (CCS)
- All Oracle privileged access (both physical and logical) are restricted to UK Citizens, residents, and present in the UK with SCClearance

■ Government Cloud Region ■ Commercial Cloud Region

The realm supports the following UK, EMEA and UK Government specific compliance standards

Region Availability	Available	Available
Realm	OC4	OC4
Region Code	LTN	BRS
Region Identifier	uk-gov-london-1	uk-gov-cardiff-1
Canonical Name	UK Gov South (London)	UK Gov West (Newport)

Oracle Industry Innovation Labs

Potential Productivity Improvements from AI in Construction

Area	Example AI Application	Estimated Productivity Improvement (%)
Project Planning & Scheduling	Automated scheduling, risk mitigation	10–20% faster project delivery
Design & Engineering	Generative design, BIM clash detection	15–30% reduction in rework/delays
Site Operations & Safety	Drones, safety monitoring	10–20% fewer safety incidents; 10–15% time savings on inspections
Supply Chain & Resource Mgmt.	Material forecasting, inventory management	5–10% reduction in material waste
Administrative Efficiencies	Document management, contract analysis	20–30% reduction in admin workload
Quality Assurance	Image recognition for defects, predictive maintenance	10–20% reduction in errors and downtime
Collaboration & Knowledge Mgmt.	AI assistants, knowledge capture	10–15% savings in time searching for info and onboarding

ORACLE
