Community Service, operates and maintain Aramco residential communities, office buildings and provides comprehensive maintenance/life support to the non-industrial facilities and infrastructures of the Company.

Business Projects

-  Aramco Stadium
-  Voltage Conversion Program
-  Remote Camp Expansion

Public Projects

-  “OLFA” Animal Shelter
-  Saudi Aramco Building Government School
-  Home Ownership

Capital Planning Charter & Scope

Capital planning division lead and streamline CS Capital and Public Support projects.

Prioritize, develop, and approve capital projects, ensuring alignment with corporate strategies and objectives

Performance Analysis Group:

Monitoring & Controlling

The performance of all active CS capital portfolio
And maintain the KPI's.

Capital Data Reports & Capital Performance

- Issuance of Capital Data Reports & Alerting Notification
- Conducting Quarterly Capital Performance Steering Committee

Capital Performance Model (CPM)

Capital Performance Model (CPM) was established with redefined **Key Performance Indicators (KPIs)**.

To address challenges such as low project performance, increased project volume, poor fund utilization, and non-adherence to cash flow plans.

Bi-19, Bi-51, and Master Appropriation (MA) Projects Performance

Bi-19 Bi-51 and Master Appropriation (MA) project categories are capital projects, both measure by five (5) KPIs: Progress Slippage, Time Extension, and Fund Utilization, Cashflow Control and Overall Performance.

SN	KPI	Objective	Equation	Target
1	Progress Slippage	To monitor project execution progress versus project plan versus construction phase	$\frac{\text{Construction plan progress} - \text{Construction actual progress}}{\text{From 0}}$	±10%
2	Time Extension	To monitor project time extension from the original time to current date	$\frac{\text{Extended time} / \text{Original time}}{\text{From 0}}$	0%
3	Fund Utilization	To monitor project commitment fund versus ERA value in order to reduce uncommitted fund	$\frac{\text{Committed fund} / \text{ER Value}}{\text{From 100}}$	±10%
4	Cashflow Control	To help understanding and monitor the current and potential financial position	$\frac{\text{Plan Cashflow} - \text{Actual Cashflow} / \text{Plan Cashflow}}{\text{From 0}}$	±10%
5	Overall Performance	To monitor projects planning and financial performance	$\frac{(\text{Progress} + (\text{Time Extension} + \text{Fund Utilization} + \text{Cashflow}) / 4 + 100)}{\text{From 100}}$	± 50%

Note:
 * Plan Progress = (Current Month - ER Completion Date) / Project Duration
 * Actual Progress = Total weights of completed stages / Current progress stage
 * Time Extension = (Revised ERC - Original ERC) / (Original ERC - ER Approval)
 * Extended Time = Revised ERC - Original ERC
 * Original Time (Project duration) = Original ERC - ER Approval

Normalization Criteria of KPIs

For Planning Guide of Level 4 Schedule Refer to COMMUNITY SERVICES Bi-19 GUIDELINE MANUAL - APPENDIX No. 4.0

In Progress Slippage KPI actual progress requires the level 4 schedule to reflect the planned all the weights of stage in the plan progress.

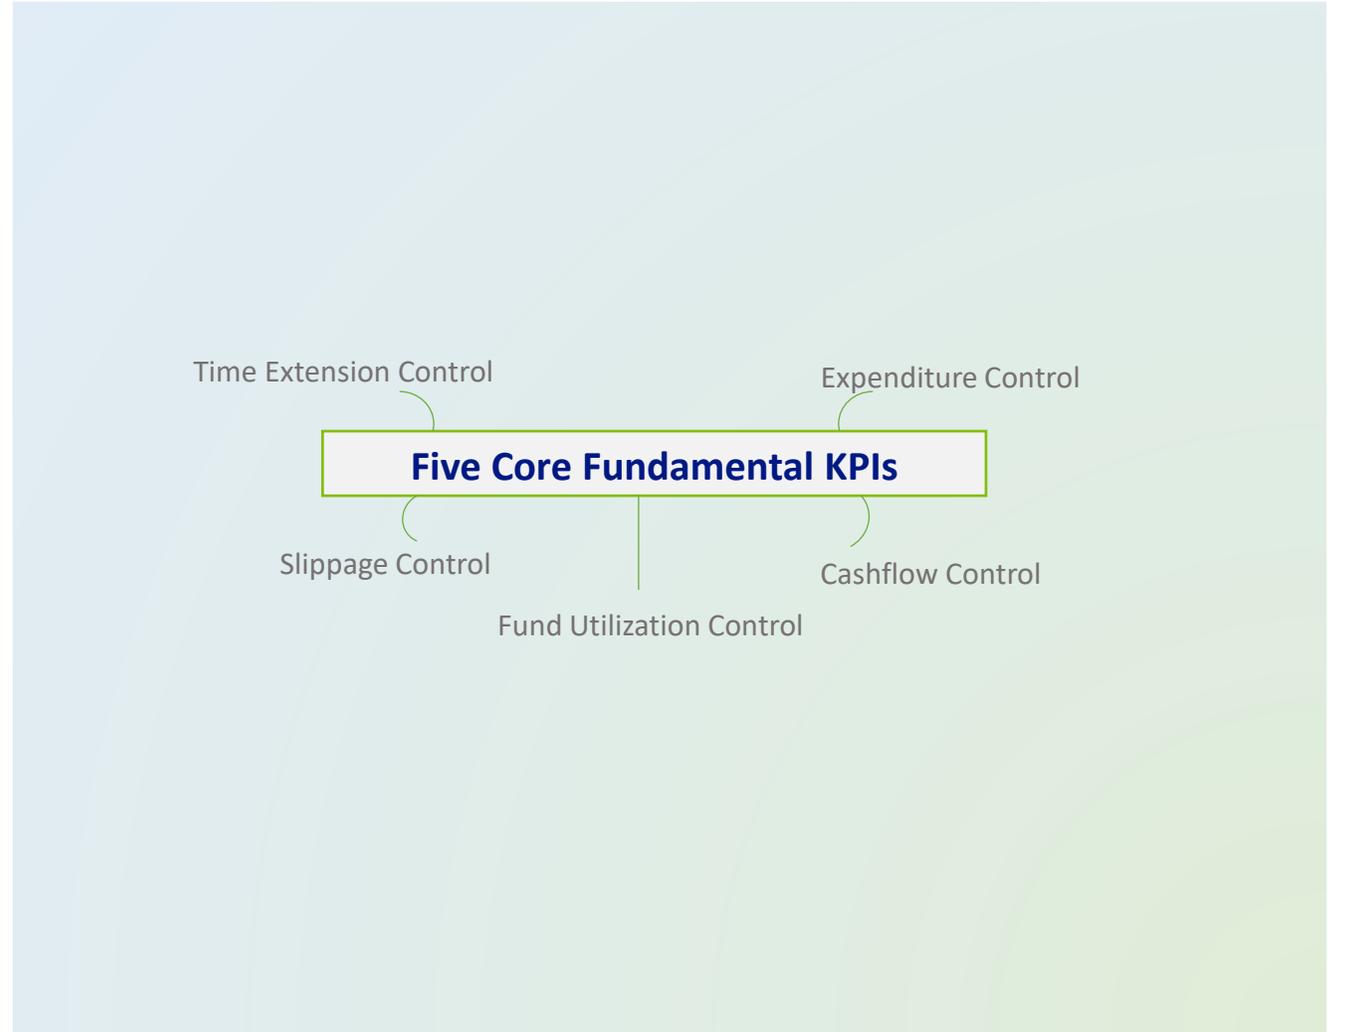

SN	KPI	100	80	60	40	20
1	Time Extension	0% - 1%	2% - 15%	16% - 33%	34% - 50%	≥51%
2	Progress Slippage	0% - (-5%)	(-20% - (-45%))	(-50% - (-21%))	(-40% - (-51%))	(-100% - (-41%))
3	Fund Utilization	100% - 90%	80% - 60%	70% - 50%	40% - 20%	10% - 0%
4	Cashflow control	≥10%				≥10%
5	Expenditure control	100% - 90%	80% - 60%	70% - 60%	50% - 40%	40% - 0%

Performance Color Code: Green, Yellow, Orange, Red, Dark Red

Operation & Maintenance (O&M) Projects Performance

O&M Project measures by three (3) Key Performance Indicators (KPIs): Expenditure Control, Cashflow Control and (Overall) Performance.

SN	KPI	Objective	Equation	Target
1	Expenditure Control	To monitor the overall ER budget progress	$\frac{\text{Actual cost} / \text{Committed fund}}{\text{From 100}}$	±10%
2	Cashflow Control	To help understanding and monitor the current and potential financial position	$\frac{\text{Plan Cashflow} - \text{Actual Cashflow} / \text{Plan Cashflow}}{\text{From 0}}$	±10%

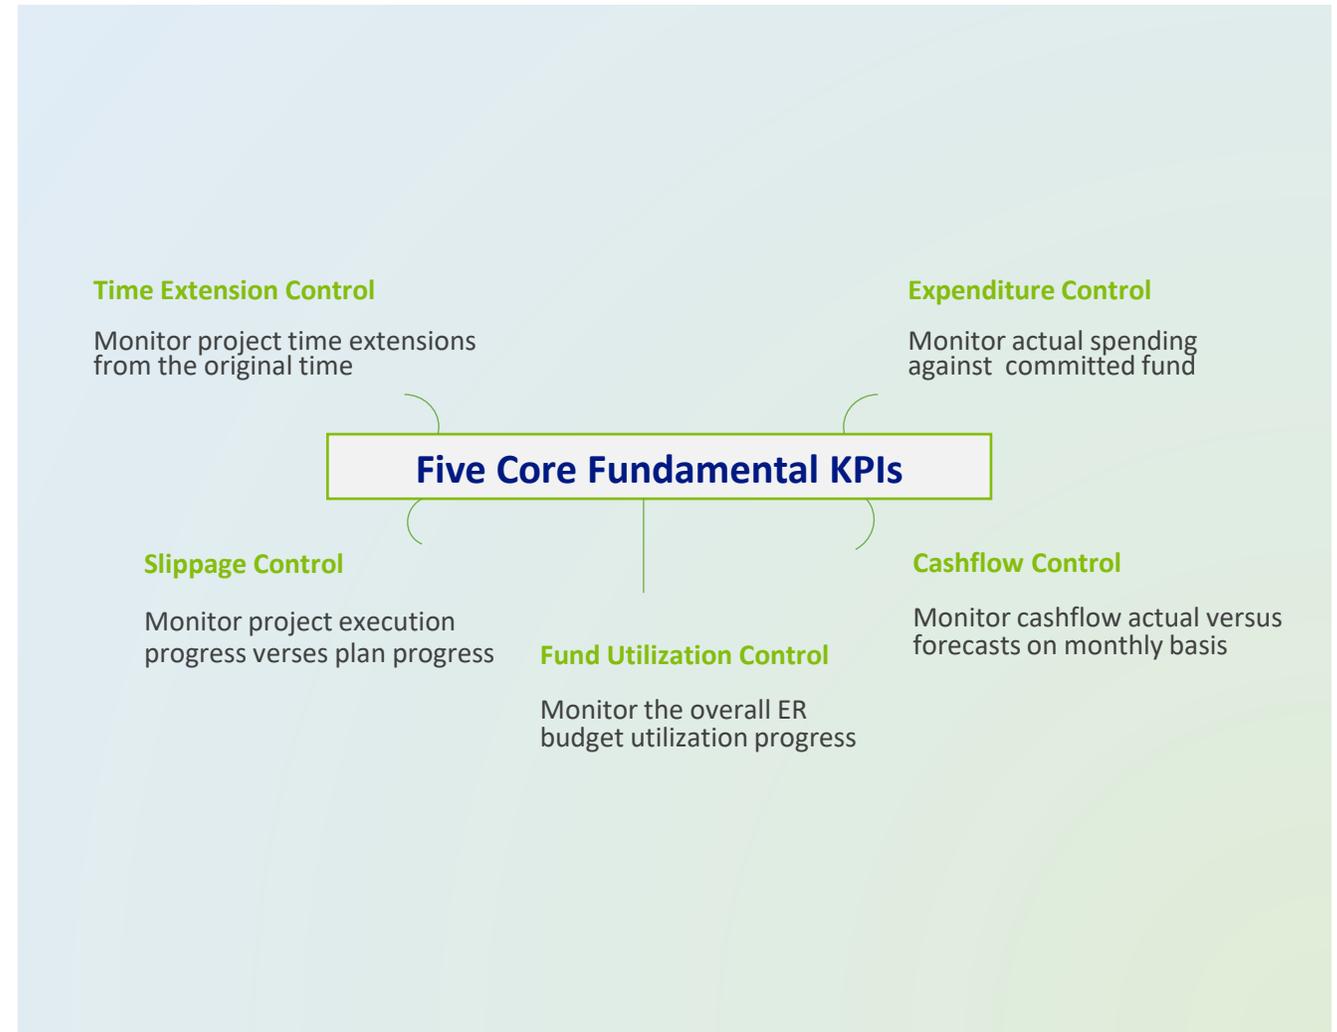

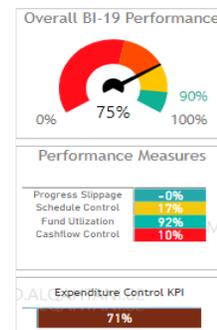

Capital Performance Model (CPM)

Capital Performance Model (CPM) was established with redefined **Key Performance Indicators (KPIs)**.

To address challenges such as low project performance, increased project volume, poor fund utilization, and non-adherence to cash flow plans.

Normalization criteria

Time Extension	Score
0%	100%
1% to 12%	80%
13% to 36%	60%
37% to 48	40%
Above 48%	20%

Capital Performance Model (CPM)

Capital Performance Model (CPM) was established with redefined **Key Performance Indicators (KPIs)**.

To address challenges such as low project performance, increased project volume, poor fund utilization, and non-adherence to cash flow plans.

Yearly Proponent Performance

- Reward early closure to boost productivity
- Deduct point from extensions and high slippage

KPIs Are Unique

Overall Performance KPI

Type 1	Slippage Control + (3 x Time Extension Control) + Fund Utilization Control + Cashflow Control	X 100
	6	
Type 2	(Expenditure Control + 2x Cashflow Control + Time Extension)	X 100
	4	

Transformation to achieve effective portfolio control

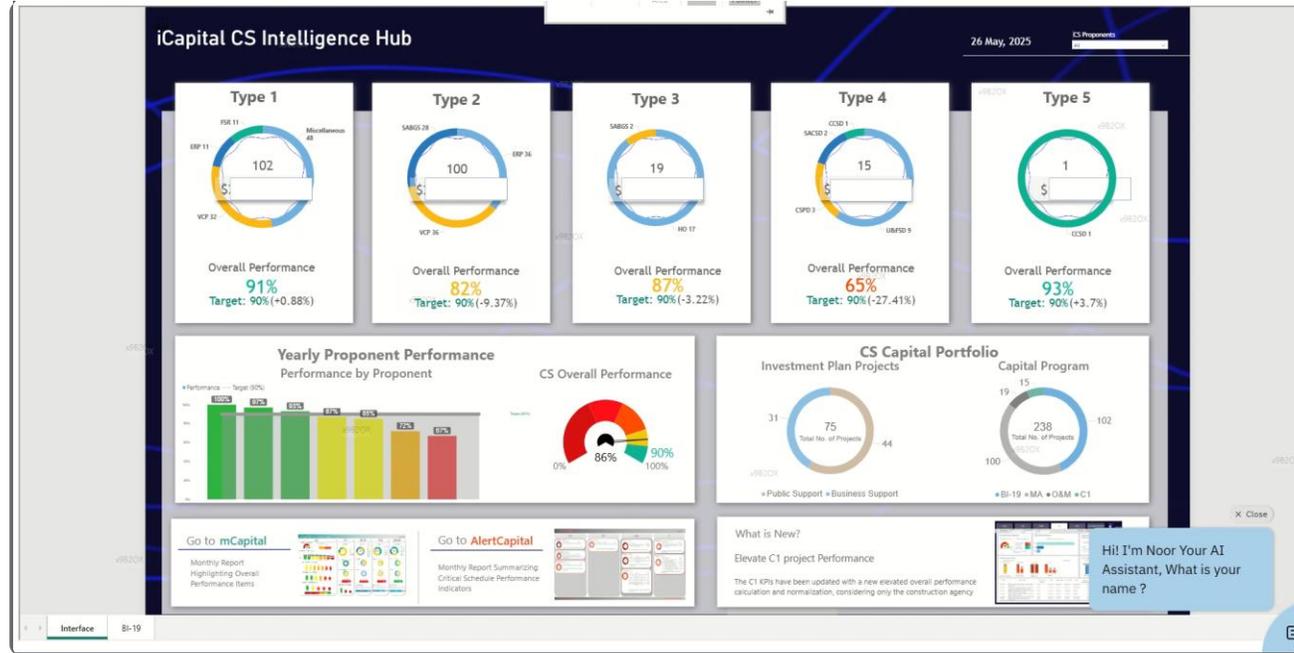

Adopted the Extract, Transform, Load (ETL) Process

ETL (**Extract, Transform, Load**) is a cross-industry standard for data integration and data mining, as it provides a solid, structured approach to building valid data.

ETL Process

Sample Data for demonstration purpose only

mCapit

Alert

QCapit

Hub has a user-friendly interface and provides real-time updates, enhanced data visualization, and automated reporting. It empowers stakeholders to manage projects more effectively, address risks, and optimize resource allocation. The system's AI capabilities offer predictive insights, helping users anticipate potential issues and take proactive measures to mitigate operational challenges.

Tools and Technologies Used

Power BI

- Live and accessible platform for all stakeholders
- Better data visualization
- Set of KPIs for Capital Performance
- Uplift of CS active Capital Portfolio interface and report

SharePoint

- Integrated multiple databases into a single centralized database
- Streamlined data integration processes
- Improved operational efficiency

RPA

- Zero pending updates
- Auto refreshes
- No human-required action

Chatbot Assistant

- Continuous learning and improvement
- More engaging with customer
- Always-on support

Transition from Descriptive to AI Predictive Analysis

The Cross-Industry Standard Process for Data Mining (CRISP-DM) is widely used because it provides a structured and systematic approach to data mining projects.

Objectives

Utilizing big data and AI technologies

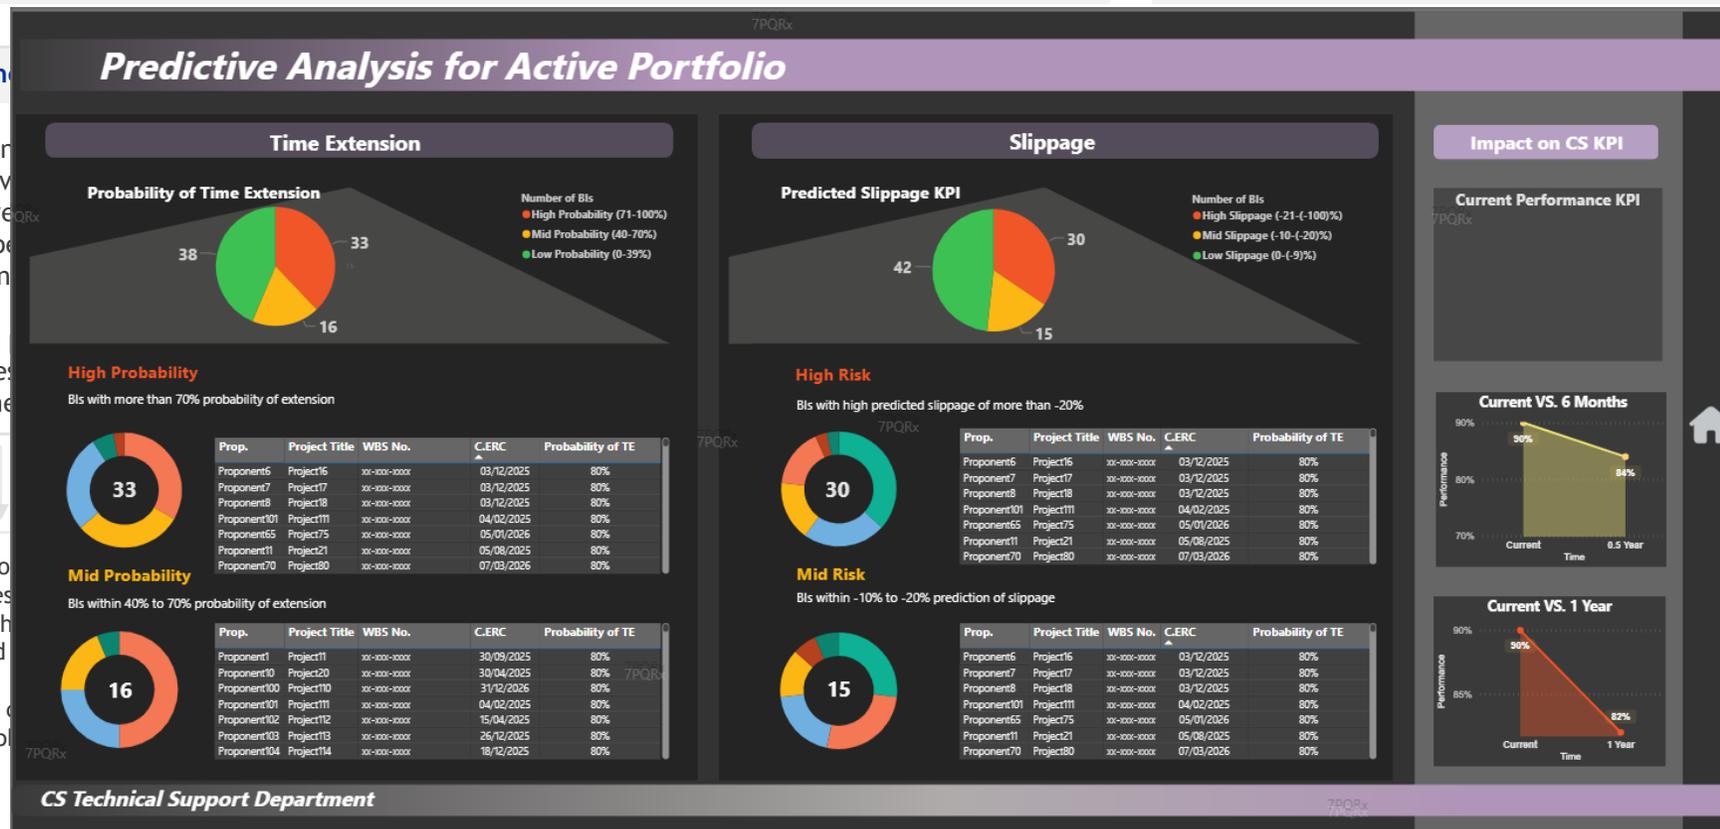

Support Our Proponents

Enhancing Project Success Rates

Business Un...

1. Transition from descriptive to predictive project performance monitoring
2. Establish clear objectives and requirements

- Ensured project deliverables directly enhance decision making and
- Set a clear path for upcoming projects

Deployment

Board Development Training

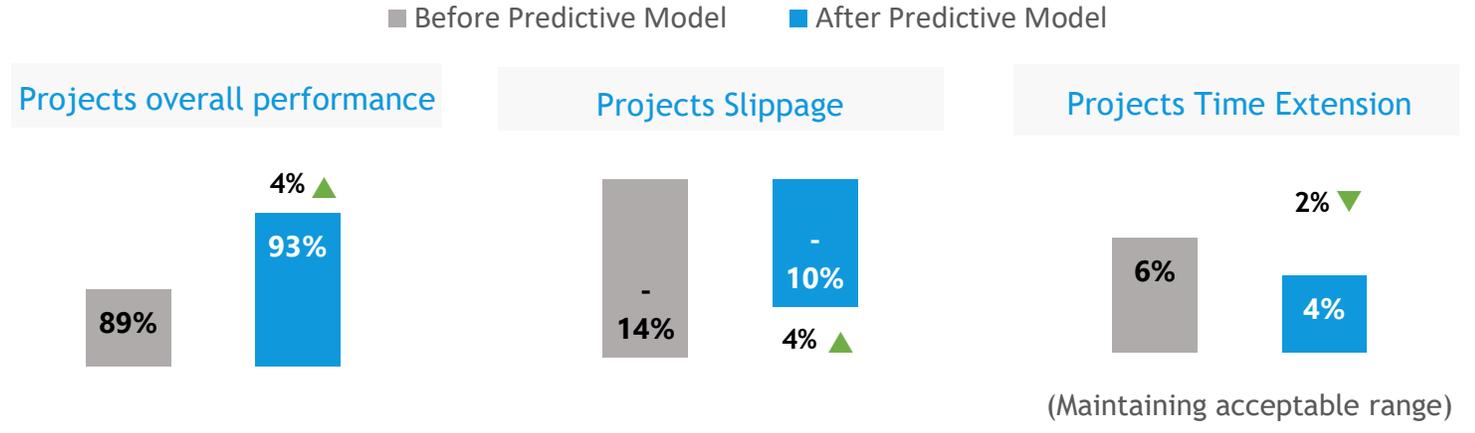

Enabled real-time decision-making with predictive insights.

Enhanced the proactive management of project timelines and budgets.

Predictive Insights

Successful Implementation of Predictive Model

AI Predictive Model Upscaling to cover Projects

Development of AI **Projects** predictive analysis model

Improved predictions

Reduce Time Extensions

Positive progress

Predictive Model Upscaling

Achieved **96% Accuracy** (5% ▲)

Anticipates **Expired & Overdue** Projects

Announcing the Citizen Development Spotlight Sixth Edition

Over 8,500-Hour Annual Saving Solutions: iCapital CS Intelligence Hub

Community Services Technical Support Department leverages three citizen development platforms (Power BI, UiPath, and IBM Watson Assistant) to establish the unique iCapital CS Intelligence Hub to digitally monitor and control the CS Capital Portfolio.
