Automated Project Controls™

Construction Schedule Organization, Analysis, Management, and Technology

SmartPM's intuitive dashboard and project workspace utilize advanced graphic visualization to bring your schedule data to life by transforming complex and abstract data into straightforward, accurate, and concise reporting of key factors driving construction projects.

Project Dashboard

Review your entire project portfolio at a glance

SmartPM's intuitive portfolio dashboard uses graphic visualization to bring your schedule data to life. SmartPM transforms complex and abstract data into straightforward, accurate, and concise reporting of key factors driving construction projects.

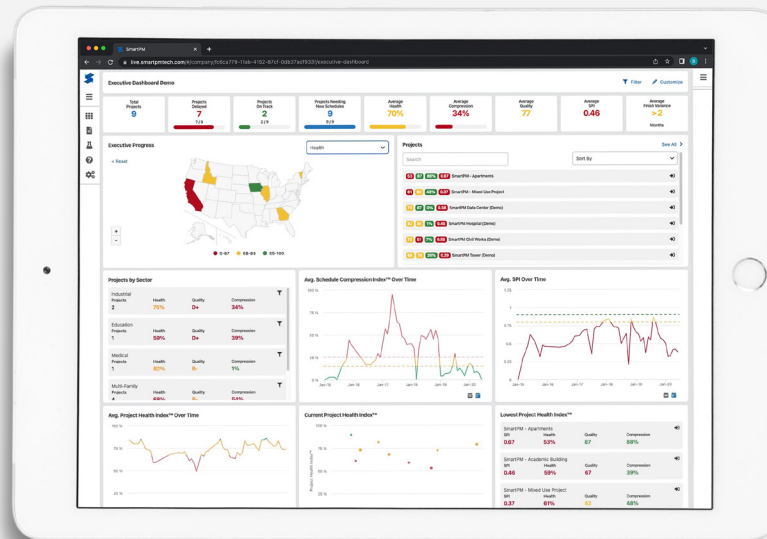

Elevate your CPM scheduling software (MS Project, P6 Primavera, Phoenix) to create active project controls, adhering to construction industry best practices and guidelines.

Executive Dashboard

Get Real-Time Insights on Your Entire Project Portfolio

Introducing SmartPM's New Executive Dashboard. This powerful tool gathers critical schedule data across all company projects, generating a macro-view of the entire portfolio. With the ability to group data by business unit, region, scheduler, or any other relevant parameter, you can easily make informed decisions about your portfolio's future.

Native integrations ensure users can be up and running within minutes and implemented across your organization within days.

Project Workspace

Your most important project schedule information-all in one place!

The Project Workspace is designed to bring key project management information to the surface, simplifying how users oversee their projects. Users can easily track key data points, such as building completion, phases, subcontractors, progress, delays, worker health, etc., enabling the tracking of key milestones across the overall project.
